Vancouver, Canada

I.   Abstract

Interviewers play a crucial part in a company's successful growth. Finding optimal solutions based on interactions in a timely and effective manner guarantees that the organisation can continue to operate and expand with little disruptions. Understanding how to build a structured interview outline will assist you in concentrating your attention on the most pressing issue and streamlining the project process. We (Group E) came across certain queries in this post about variables, qualities, basics, project purpose, and project direction.

II.   Developed Interview Questions

Thank you participating in this interview. As I explained earlier, we are really interested in how customers use your product, and answers from you will help us understand that better. So, we really appreciate you taking time and answering the questions. The outline of this paper focuses on questions related to product, Customer experience, Knowing the mandatory fields of the data collection, and prospective future goals regarding the product.

Theme	Questions
Product	1. Any Specific reasons why there are no mandatory fields? Elaborating an issue! If a data is skipped in a particular fields / no data is entered through out a resume is still developed (though the resume is blank) 2. Can you please, put on a thought over the Standard Format for entering the data? Elaboration: If a customer enters a data in the city field, the variable accepts the numerical data type as well. Concluding all sort of characters are accepted in this data field. 3. Does CoverQuick provide the word-count limit for cover – letter? Elaborating: For any NLP model we can also specify the word-count while writing a cover letter for example, the AI model can be requested to write cover letter in 500 words.

Fundamental	1. What's the final objective of CoverQuick platform? Elaborating the ideology behind the question: Is it more towards customer service or providing analysis about better product quality?
Technical Requirement	1. Will you be able to provide a sensitive data for analysis? Elaboration The research questions needs to find the age range of the customer. But, the dataset don't have actual parameters / variables that calculate the Exploratory Data Analysis (EDA). The age range we as an analyst provide from experience, education parameter will not be reliable to answer the business question.
Future Scope	1. Apart from this research question analysis Can a student propose there project to improve or work on AI model? NLP and LLM will help the project to get more advanced. This will help CoverQuick perform better quality Cover-Letters.

Conclusion

The goal of the interview is to collect, and synthesis subject matter expert opinion and experience related to product development. These questions can help our group get a gist about the fundamentals, Future scope, Product development, and Customer service. The information collected through the interview will contribute to the body of knowledge that serves as a foundation for our findings and conclusions.
